Text for question 9 to 13

An iceberg is an enormous piece of ice floating in the sea, "Berg" is the German word for mountain. In the coldest parts of land and sea are both covered by sheets of ice, over 300 meters deep at the center

Tongues of ice, called glaciers, stretch out into the open water of the oceans. The sea water melts the bottom part of these glaciers, then the top part slides into the water with a might roar. The great piece of ice sinks for a short time beneath the surface then it rises again, and floats away as a new iceberg. Some iceberg are miles across to begin with, and travel for thousands of miles and several years before they finally melt. The part of an iceberg which can be seen above the water is only about one-ninth of the total size. The rest is hidden beneath the waves.

One of the world's worst disasters at sea was in 1912 when the liner "Titanic" collided with an iceberg on her maiden voyage.

9. What happens when the top part of the glacier slides into the water?
a. It will float away c. The water will be warmer
b. There will be a big roar d. The water will have tongues
10. How long can the iceberg survive before they melt?
a. a day b. a month c. a week d. some years
